

We sincerely thank customers who love Ceramine.

First, Korea is the most developed country in the cosmetics industry, and it produces products with professional human resources that study high-tech equipment and technology. To minimize defects, automatic production by high-tech equipment is introduced and inspected. We would like to inform customers about the reason why Ceramine insists on using transparent pouches in mask packs and the effectiveness of its efficacy.

Let me explain why Ceramine uses transparent pouches in our mask packs. Ordinary pouches used by most of the existing cosmetics industry are a mixture of 'Aluminum' and 'PET' that do not show the contents. The purified water from these aluminum-mixed pouches also evaporates into water vapor but in a minimal amount. However, in modern times, Sustainable Development(SD) companies don't use aluminum-mixed pouches because aluminum-mixed pouches can't be recycled and will never decay after 100 years, destroying ecosystems and creating a chain of pollution problems. So, we use a very light and transparent pouch without aluminum. Ceramine is a safe product that can be used by all three generations, from babies to adults and older people. As a brand that aims for harmless naturalism and sustainable development(SD), aluminum-mixed pouches are not used as a leader in curbing environmental waste production. In addition, the transparent pouch does not affect the quality of the product because only a portion of purified water evaporates in proportion to the time with water vapor, not the evaporation of essence components that deliver active ingredients to the skin, and Ceramine uses expensive safe materials to make high-quality products, so it confidently uses the transparent pouch that the contents see to consumers.

In this regard, We would like to inform you about the effect of cosmetics on water vapor that evaporates in small amounts using a transparent pouch. The solid and liquid materials made in the essence ingredients of cosmetics are made into a liquid state through a specific process along with purified water. At this time, purified water naturally evaporates in small amounts over time. However, the effective raw materials used in cosmetics do not evaporate and remain in essence ingredients due to their very high vaporization point and different molecular structure, so they do not affect efficacy and effectiveness when used. This is because the purified water in the mask pack serves to wet the sheet properly and is not an effective ingredient to moisturize the skin. (It is a principle similar to that the liquid state of salt water evaporates into water vapor (H₂O) over time, and the salt remains as it is.) To demonstrate this, an experiment was conducted with an FT-IR spectrometer using infrared rays to analyze the active ingredients by reaching the unique wavelength range for each efficacy of raw materials. We show the experimental indicators of the experiment by comparing the essence of the Ceramine Aqua cypress mask pack immediately after production with the essence of the mask pack, which naturally evaporated a small amount of water vapor over two years. There is no problem with the quality and effectiveness of the product, so please use it with confidence.

Ceramine will always strive to make safe products with high-efficiency raw materials for fundamental skin improvement, healthy essence free from harmful ingredients, and safe subsidiary materials that do not release waste and environmental hormones with eco-friendly subsidiary materials.

Thank you very much for the trust, support, and love of the Malaysian customers for Ceramine.

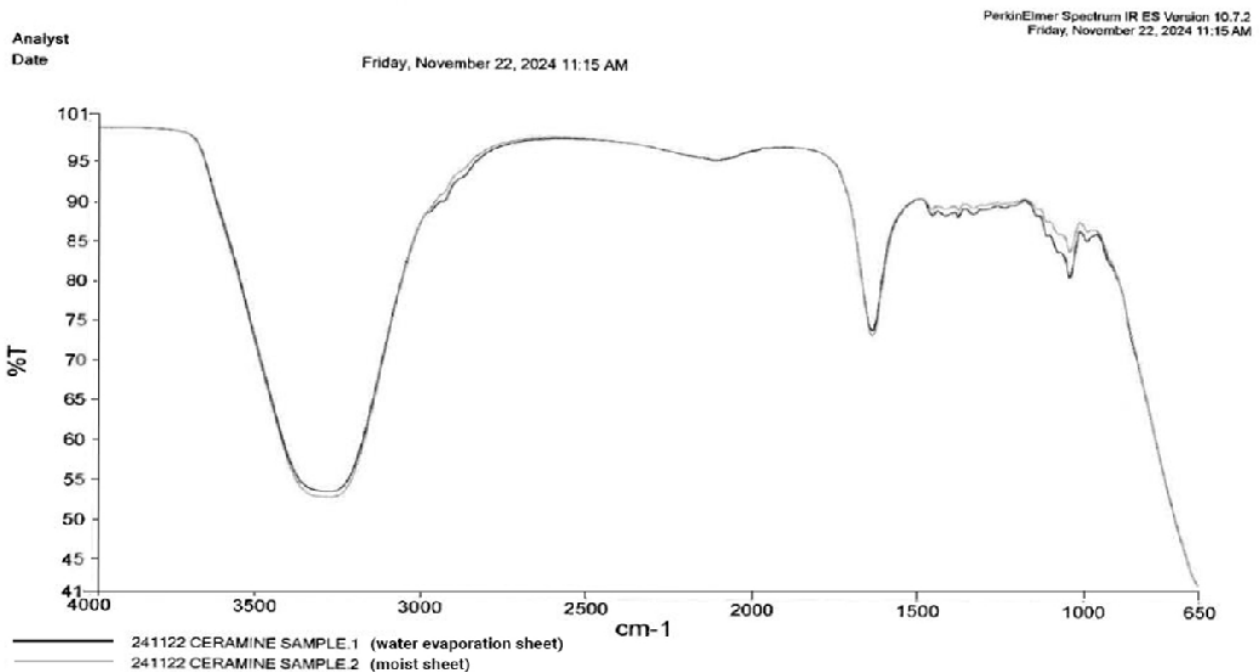

衷心感谢喜爱赛拉玛茵的各位顾客！

首先，韩国是化妆品产业最发达的国家，以研究高品质的优秀人才和尖端设备及技术生产产品。为了尽量减少不良，引进了尖端设备的自动生产及验收工作。

想向大家介绍赛拉玛茵坚持使用透明面膜袋的理由和功效的有效性。现有化妆品行业大部分使用的看不到内容物的普通包装袋是混合"Aluminum"和"PET"等的混合纸。该铝混合袋的水也蒸发成水蒸气，但蒸发量极少。然而，在现代可持续发展主义企业开始不再使用铝混合纸，而是使用其他透明轻便的替代纸。因为铝混合纸无法回收，100年后也不会腐烂，是破坏生态系统的罪魁祸首，成为连锁污染问题。赛拉玛茵是儿童、成人、老人3代都可以一起使用的安全产品，作为以无害的自然主义&可持续发展为目标的品牌，为带头抑制环境废弃物的产生，从不使用铝混合包装袋。另外，透明包装袋不会使向皮肤输送有效成分的精华成分蒸发，而是部分水会按照时间比例蒸发一定量，因此不会影响产品的质量。赛拉玛茵使用可回收辅料和高价原料，只生产高品质产品，这就是为什么我们自信地使用消费者能够看到内容物的透明袋。

与此相关，我们想介绍一下化妆品对使用透明袋而少量蒸发的水蒸气功效的影响。制成化妆品精华的固体、液体原料与水一起经过一定的过程制成液体状态。此时，水具有随时间自然少量蒸发的特性。但化妆品中使用的功效原料汽化点非常高、分子结构不同，不会蒸发，而是留在精华液中，使用时绝对不会影响功效和效果。因为面膜中含有的水是适当浸湿面膜纸的作用，而不是滋润镇定肌肤的功效成分。（其原理与盐水的液体随着时间的流逝，只有水（H₂O）蒸发成水蒸气，盐则保留不变。）为证明这一点，采用红外线FT-IR光谱仪，对每种原料功效达到固有的波长区间，进行了有效成分分析实验。下面一起公开刚生产的赛拉玛茵扁柏水光面膜精华与2年后自然蒸发少量水蒸气面膜精华进行比较的实验指标。产品的质量和效果完全没有问题，请放心使用。

赛拉玛茵始终致力于使用从根本上改善皮肤的高效原材料、不含有害成分的健康精华、以及不排放废弃物和环境激素的安全环保辅料，只生产安全的产品并努力精进产品。非常感谢马来西亚顾客对赛拉玛茵的信任、支持和厚爱。
